(412) - 296 - 1415 | apeyyala21@gmail.com | [Linkedin](#)

EDUCATION

Carnegie Mellon University

May 2028

Computer Science Major, Machine Learning Concentration

- **Coursework:** Introduction to Artificial Intelligence, Data Structures and Algorithms, Introduction to Computer Systems, Fundamentals of Computer Science, Multivariable Calculus, Concepts of Mathematics, Probability/Statistics

Academies of Loudoun

Aug 2020 - May 2024

Engineering Course

- **GPA:** 4.52

TECHNICAL EXPERIENCE

PNC Financial Services

May 2026 - Present

Software Engineering Intern

- Built an AI-powered engineering platform that analyzed team communications, identified action items, generated task summaries, and improved engineering workflow efficiency using Microsoft Copilot Studio, Power Automate, and Microsoft 365 integration
- Built a Hopworks-based feature monitoring and drift detection program for debit card fraud detection, deriving features like average transaction amount from raw data, comparing their distributions against training-data baselines, and generating alerts when detected drift exceeded configurable thresholds using Python, PySpark, Jupyter Notebooks, and Hopworks
- Prepared 20+ enterprise repositories for migration from Bitbucket to GitHub Enterprise by validating repository readiness, remediating migration blockers, and creating technical documentation and onboarding resources
- Collaborated across engineering, platform, and vendor teams to troubleshoot CI/CD, repository, security-scanning, and feature-store issues while presenting findings during technical capstone demonstrations

Steak N' Bake (Personal Project)

Nov 2025 - Present

Software Developer

- Awarded CrowdStrike's "High Flying" Award for innovation and technical execution for the CMU Build-18's Competition
- Oversaw end-to-end development of a SwiftUI iOS application to control and monitor a custom-built, automated steak-cooking device
- Developed the end-to-end Bluetooth Low Energy (BLE) communication layer between the mobile app and an Arduino-controlled system, enabling real-time data exchange and remote operation
- Led development for all software structure, implementation, and debugging, coordinating with hardware-focused teammates to integrate the application with the physical system
- Implemented real-time telemetry features, such as live temperature streaming and Bluetooth connection status

Association for Computing Machinery at CMU

Aug 2024 - Present

- Developed a physical prototype of Wordle utilizing Python and Arduino to randomly select a 5-lettered dictionary word and play the game on an LCD
- Participated in multiple Hackathons hosted by ACM at CMU, developing web-development projects and simple retro games using JavaScript, Python3, Pygame, GUI, and C++
- Attended meetings in which imperative coding skills were learned: Github, Git, Terminal, HTML, CSS, etc

Materials Structures Composites

Jul 2023 - Aug 2023

Intern

- Created a process to evaluate the tensile strength of multiple carbon-fiber composites with pressure
- Worked on a classified project in the materials engineering industry

Boy Scouts of America (BSA)

Sep 2017 - Present

Eagle Scout, Troop Historian, Patrol Leader Troop 2970

- Conducted an Eagle Project where I engineered a 16 ft by 8 ft wooden storage unit for the purpose of organizing roughly half a ton's worth of instruments, and led a group of 22 volunteers over the duration of 2 days, totaling 202 hours of service
- Developed leadership skills by organizing over 40 troop activities for 15 other scouts

Capstone Research Project

May 2023 - Jun 2024

- Creating an evaporation-powered engine derived from Columbia University's design
- Changing bacteria and structure to find changes in efficiency and voltage
- Discovered the ideal bacteria to maximize the displacement of tapes used to create a mass-imbalance on a rotary engine

HONORS AND RECOGNITION

- **Eagle Scout:** Boy Scouts of America (BSA), National Recognition; Awarded in July 2023

ADDITIONAL INFORMATION

- **Programming Languages:** Java, Python, C/C++, Object-oriented Programming
- **Web And Mobile Development:** React.js, Swift/SwiftUI, HTML
- **AI And Machine Learning:** AI Solution Implementation, Large Dataset Handling, Hopworks, Claude Code
- **Tools And Collaboration:** Git, GitHub, Power Automate, Jupyter, Agile/Jira, Leadership
